14. Diagnostic Procedure with Diagnostic Trouble Code (DTC)

A: DTC 11 ENGINE SPEED SIGNAL

DIAGNOSIS:
The engine speed input signal circuit is open or shorted.

TROUBLE SYMPTOM:
- No lock-up (after engine warm-up).
- The AT OIL TEMP warning light remains on when vehicle speed is “0”.

WIRING DIAGRAM:
# AUTOMATIC TRANSMISSION (DIAGNOSTICS)

## CHECK INPUT SIGNAL FOR TCM.

1) Connect the connectors to TCM and ECM.
2) Start the engine and warm-up the transmission until ATF temperature is above 80°C (176°F).

**Note:**
If ambient temperature is below 0°C (32°F), drive the vehicle until ATF reaches its operating temperature.
3) Idle the engine.
4) Measure the voltage between TCM connector and chassis ground.

**Connector & terminal**

## AUTOMATIC TRANSMISSION (DIAGNOSTICS)

### DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

#### 10 CHECK INPUT SIGNAL FOR TCM USING SUBARU SELECT MONITOR.

1) Connect all connectors.
2) Connect the Subaru Select Monitor to data link connector.
3) Lift-up or raise the vehicle and place safety stands.

**NOTE:**
Raise all wheels off floor.

4) Turn the ignition switch to ON and turn Subaru Select Monitor switch to ON.
5) Start the engine.

6) Read the data of vehicle speed using Subaru Select Monitor.
   • Compare the speedometer with Subaru Select Monitor indications.
   • Vehicle speed is indicated in "km/h" or "MPH".

7) Slowly increase the vehicle speed to 60 km/h or 37 MPH.

**NOTE:**
The speed difference between front and rear wheels may light the ABS warning light, but this indicates no malfunction. When AT control diagnosis is finished, perform the ABS memory clearance procedure of on-board diagnostics system. <Ref. to ABS-21, Clear Memory Mode.>

## AUTOMATIC TRANSMISSION (DIAGNOSTICS)

### DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

#### 5 CHECK INPUT SIGNAL FOR TCM.

1) Connect the connectors to TCM and ECM.
2) Start the engine, and warm-up the transmission until ATF temperature is above 80°C (176°F).

**NOTE:**
If ambient temperature is below 0°C (32°F), drive the vehicle until ATF reaches its operating temperature.
3) Idle the engine.
4) Measure the voltage between TCM connector and chassis ground.
   
   **Connector & terminal (B55) No. 20 (+) — Chassis ground (−):**

   Is the voltage 0.4 — 1.6 V? Even if the AT OIL TEMP warning light illuminates, the circuit has returned to a normal condition at this time. A temporary poor contact of the connector or harness may be the cause. Repair the harness or connector in TCM and ECM.

Go to step 7.

#### 6 CHECK INPUT SIGNAL FOR TCM USING SUBARU SELECT MONITOR.

1) Connect the connectors to TCM and ECM.
2) Connect the Subaru Select Monitor to data link connector.
3) Start the engine, and turn Subaru Select Monitor switch to ON.
4) Warm-up the engine until engine coolant temperature is above 80°C (176°F).
5) Idle the engine.
6) Read the data of intake manifold pressure signal using Subaru Select Monitor.
   
   • Display shows the intake manifold pressure signal value sent from ECM.

   Is the value voltage 0.4 — 1.6 V?

   Even if the AT OIL TEMP warning light illuminates, the circuit has returned to a normal condition at this time. A temporary poor contact of the connector or harness may be the cause. Repair the harness or connector in TCM and ECM.

Go to step 7.

#### 7 CHECK POOR CONTACT.

Is there poor contact in intake manifold pressure signal circuit?

Replace the TCM. <Ref. to 4AT-67, Transmission Control Module (TCM).>
I: DTC 71 SHIFT SOLENOID 1

DIAGNOSIS:
The output signal circuit of shift solenoid 1 is open or shorted.

## AUTOMATIC TRANSMISSION (DIAGNOSTICS)

### DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

#### Step 7: CHECK SHIFT SOLENOID 1 (IN TRANSMISSION).
1. Remove the transmission connector from bracket.
2. Lift-up or raise the vehicle and support with safety stand.
   - **NOTE:** Raise all wheels off ground.
3. Drain the ATF.
   - **CAUTION:** Do not drain the ATF until it cools down.
4. Remove the oil pan, and disconnect connector from shift solenoid 1.
5. Measure the resistance between shift solenoid 1 connector and transmission ground.
   - **Terminals**
     - No. 1 — Transmission ground:
     - Is the resistance 10 — 16 Ω? Go to step 8.
     - Replace the shift solenoid 1. <Ref. to 4AT-61, Shift Solenoids, Duty Solenoids and ATF Temperature Sensor.>

#### Step 8: CHECK HARNESS CONNECTOR BETWEEN SHIFT SOLENOID 1 AND TRANSMISSION.
- Measure the resistance of harness between shift solenoid 1 and transmission connector.
  - **Connector & terminal**
    - (T4) No. 1 — (AT5) No. 1:
    - Is the resistance less than 1 Ω? Go to step 9.
    - Repair the open circuit in harness between shift solenoid 1 and transmission connector.

#### Step 9: CHECK HARNESS CONNECTOR BETWEEN SHIFT SOLENOID 1 AND TRANSMISSION.
- Measure the resistance of harness between shift solenoid 1 connector and transmission ground.
  - **Connector & terminal**
    - (T4) No. 1 — Transmission ground:
    - Is the resistance more than 1 MΩ? Even if the AT OIL TEMP warning light illuminates, the circuit has returned to a normal condition at this time. A temporary poor contact of the connector or harness may be the cause. Repair the harness or connector in shift solenoid 1 and transmission.
    - Repair the short circuit harness between shift solenoid 1 and transmission connector.
J: DTC 72 SHIFT SOLENOID 2

DIAGNOSIS:
The output signal circuit of shift solenoid 2 is open or shorted.

TROUBLE SYMPTOM:
Does not shift.

**Connector & terminal**  
NON-TURBO MODEL  
(B54) No. 6 (+) — Chassis ground (−):  
**TURBO MODEL**  
(B54) No. 5 (+) — Chassis ground (−): | Is the voltage less than 1 V? | Even if the AT OIL TEMP warning light illuminates, the circuit has returned to a normal condition at this time. A temporary poor contact of the connector or harness may be the cause. Repair the harness or connector in TCM and transmission. | Go to step 5. |
## DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

### AUTOMATIC TRANSMISSION (DIAGNOSTICS)

### DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

#### 5 CHECK POOR CONTACT.

- Is there poor contact in shift solenoid 2 circuit?
- Repair the poor contact.
- Replace the TCM. 
  - Ref. to 4AT-67, Transmission Control Module (TCM).

#### 6 CHECK SHIFT SOLENOID 2 (IN TRANSMISSION).

1. Remove the transmission connector from bracket.
2. Drain the ATF.

**CAUTION:**
- Do not drain the ATF until it cools down.
3. Remove the oil pan, and disconnect connector from shift solenoid 2.
4. Measure the resistance between shift solenoid 2 connector and transmission ground.

**Terminals**
- No. 1 — Transmission ground:

- Is the resistance 10 — 16 Ω?
- Go to step 7.
- Replace the shift solenoid 2. 
  - Ref. to 4AT-61, Shift Solenoids, Duty Solenoids and ATF Temperature Sensor.

#### 7 CHECK HARNESS CONNECTOR BETWEEN SHIFT SOLENOID 2 AND TRANSMISSION.

- Measure the resistance of harness between shift solenoid 2 and transmission connector.

**Connector & terminal**
- (AT6) No. 1 — (T4) No. 2:

- Is the resistance less than 1 Ω?
- Go to step 8.
- Repair the open circuit in harness between shift solenoid 2 and transmission connector.

#### 8 CHECK HARNESS CONNECTOR BETWEEN SHIFT SOLENOID 2 AND TRANSMISSION.

- Measure the resistance of harness between shift solenoid 2 connector and transmission ground.

**Connector & terminal**
- (T4) No. 2 — Transmission ground:

- Is the resistance more than 1 MΩ?
- Even if the AT OIL TEMP warning light illuminates, the circuit has returned to a normal condition at this time. A temporary poor contact of the connector or harness may be the cause. Repair the harness or connector in shift solenoid 2 and transmission.
- Repair the short circuit harness between shift solenoid 2 and transmission connector.
K: DTC 73 LOW CLUTCH TIMING SOLENOID

DIAGNOSIS:
The output signal circuit of low clutch timing solenoid is open or shorted.

TROUBLE SYMPTOM:
Excessive shift shock.

### CHECK LOW CLUTCH TIMING SOLENOID (IN TRANSMISSION)

1. Remove the transmission connector from bracket.
2. Lift-up or raise the vehicle and support with safety stand.
3. Drain the ATF.
4. Remove the oil pan, and disconnect connector from low clutch timing solenoid.
5. Measure the resistance between low clutch timing solenoid connector and transmission ground.

   **Terminals**
   - No. 1 — Transmission ground:

   **Is the resistance 10 — 16 Ω?**  
   - Go to step 8.  
   - Replace the low clutch timing solenoid. <Ref. to 4AT-61, Shift Solenoids, Duty Solenoids and ATF Temperature Sensor.>

### CHECK HARNESS CONNECTOR BETWEEN LOW CLUTCH TIMING SOLENOID AND TRANSMISSION

6. Measure the resistance of harness between low clutch timing solenoid and transmission connector.

   **Connector & terminal**
   - (AT9) No. 1 — (T4) No. 3:

   **Is the resistance less than 1 Ω?**  
   - Go to step 9.  
   - Repair the open circuit in harness between low clutch timing solenoid and transmission connector.

### CHECK HARNESS CONNECTOR BETWEEN LOW CLUTCH TIMING SOLENOID AND TRANSMISSION

7. Measure the resistance of harness between low clutch timing solenoid connector and transmission ground.

   **Connector & terminal**
   - (T4) No. 3 — Transmission ground:

   **Is the resistance more than 1 MΩ?**  
   - Even if the AT OIL TEMP warning light illuminates, the circuit has returned to a normal condition at this time. A temporary poor contact of the connector or harness may be the cause. Repair the harness or connector in low clutch timing solenoid and transmission.
   - Repair the short circuit harness between low clutch timing solenoid and transmission connector.
L: DTC 74 2-4 BRAKE TIMING SOLENOID

DIAGNOSIS:
The output signal circuit of 2-4 brake timing solenoid is open or shorted.

TROUBLE SYMPTOM:
Excessive shift shock.

### 14 CHECK OUTPUT SIGNAL EMITTED FROM TCM USING SUBARU SELECT MONITOR.

1) Turn the ignition switch to ON (engine OFF).
2) Throttle is fully open.

Is the value less than 25%?

- **Even if the AT OIL TEMP warning light illuminates,** the circuit has returned to a normal condition at this time. A temporary poor contact of the connector or harness may be the cause. Repair the harness or connector in TCM and transmission.
- **Go to step 15.**

### 15 CHECK POOR CONTACT.

Is there poor contact in 2-4 brake duty solenoid circuit?

- Repair the poor contact.
- **Replace the TCM.** <Ref. to 4AT-67, Transmission Control Module (TCM).>

### 16 CHECK 2-4 BRAKE DUTY SOLENOID (IN TRANSMISSION).

1) Remove the transmission connector from bracket.
2) Drain the ATF.

**CAUTION:**
Do not drain the ATF until it cools down.

3) Remove the oil pan, and disconnect connector from 2-4 brake duty solenoid.
4) Measure the resistance between 2-4 brake duty solenoid connector and transmission ground.

- **Terminals**
  - No. 1 — Transmission ground:

Is the resistance 2.0 — 4.5 Ω?

- Go to step 17.
- **Replace the 2-4 brake duty solenoid.** <Ref. to 4AT-61, Shift Solenoids, Duty Solenoids and ATF Temperature Sensor.>

### 17 CHECK HARNESS CONNECTOR BETWEEN TRANSMISSION AND 2-4 BRAKE DUTY SOLENOID.

Measure the resistance of harness between 2-4 brake duty solenoid and transmission connector.

- **Connector & terminal**
  - (T4) No. 9 — (AT7) No. 1:

Is the resistance less than 1 Ω?

- Go to step 18.
- **Replace the open circuit in harness between 2-4 brake duty solenoid and transmission connector.**

### 18 CHECK HARNESS CONNECTOR BETWEEN TRANSMISSION AND 2-4 BRAKE DUTY SOLENOID.

Measure the resistance of harness between transmission connector and transmission ground.

- **Connector & terminal**
  - (T4) No. 9 — Transmission ground:

Is the resistance more than 1 MΩ?

- **Even if the AT OIL TEMP warning light illuminates,** the circuit has returned to a normal condition at this time. A temporary poor contact of the connector or harness may be the cause. Repair the harness or connector in line pressure duty solenoid and transmission.
- **Repair the short circuit in harness between 2-4 brake duty solenoid and transmission connector.**
O: DTC 77 LOCK-UP DUTY SOLENOID

DIAGNOSIS:
The output signal circuit of lock-up duty solenoid is open or shorted.

TROUBLE SYMPTOM:
No "lock-up" (after engine warm-up).

### AUTOMATIC TRANSMISSION (DIAGNOSTICS)

#### DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

**Step 8**

**CHECK OUTPUT SIGNAL Emitted FROM TCM USING SUBARU SELECT MONITOR.**

1. Connect the connectors to TCM and transmission.
2. Lift-up the vehicle and place safety stand.
3. Connect the Subaru Select Monitor to data link connector.
4. Start the engine and turn Subaru Select Monitor switch to ON.
5. Start the engine and warm-up the transmission until ATF temperature is above 80°C (176°F).

**NOTE:**
- If ambient temperature is below 0°C (32°F), drive the vehicle until ATF reaches its operating temperature.

6. Read the data of lock-up duty solenoid using Subaru Select Monitor.
   - Lock-up duty solenoid is indicated in “%”.
7. Move the selector lever to “D” range and slowly increase vehicle speed to 75 km/h (47 MPH). Wheels will lock-up.

**NOTE:**
- The speed difference between front and rear wheels may light the ABS warning light, but this indicates no malfunction. When AT control diagnosis is finished, perform the ABS memory clearance procedure of on-board diagnostics system. *(Ref. to ABS-21, Clear Memory Mode.)*

<table>
<thead>
<tr>

<tr>
<th>Step</th>
<th>Check</th>
<th>Yes</th>
<th>No</th>
</tr>
</thead>
<tbody>
<tr>
<td>10</td>
<td>Is there poor contact in lock-up duty solenoid circuit?</td>
<td>Repair poor contact.</td>
<td>Replace the TCM. <em>(Ref. to 4AT-67, Transmission Control Module (TCM).)</em></td>
</tr>
</tbody>
</table>
### Step Check Lock-up Duty Solenoid (In Transmission)

1. Remove the transmission connector from bracket.
2. Drain the ATF.

**CAUTION:** Do not drain the ATF until it cools down.

3. Remove the oil pan and disconnect connector from lock-up duty solenoid.
4. Measure the resistance between lock-up duty solenoid connector and transmission ground.

<table>
<thead>
<tr>
<th>Terminals</th>
<th>No. 1 — Transmission ground</th>

</thead>
<tbody>
<tr>
<td>Connector &amp; terminal</td>
<td>(T4) No. 13 — (AT3) No. 1</td>
</tr>
</tbody>
</table>

Is the resistance 10 — 17 Ω?  
Go to step 12.  
Replace the lock-up duty solenoid.  
<Ref. to 4AT-61, Shift Solenoids, Duty Solenoids and ATF Temperature Sensor.>

### Step Check Harness Connector Between Lock-up Duty Solenoid and Transmission

Measure the resistance of harness between lock-up duty solenoid and transmission connector.

| Connector & terminal | (T4) No. 13 — (AT3) No. 1 |

Is the resistance less than 1 Ω?  
Go to step 13.  
Repair the open circuit in harness between TCM and transmission connector.

### Step Check Harness Connector Between Lock-up Duty Solenoid and Transmission

Measure the resistance of harness between transmission connector and transmission ground.

| Connector & terminal | (T4) No. 13 — Transmission ground |

Is the resistance more than 1 MΩ?  
Even if the AT OIL TEMP warning light illuminates, the circuit has returned to a normal condition at this time. A temporary poor contact of the connector or harness may be the cause. Repair the harness or connector in lock-up duty solenoid and transmission.

Repair the short circuit in harness between lock-up duty solenoid and transmission connector.
P: DTC 79 TRANSFER DUTY SOLENOID

DIAGNOSIS:
The output signal circuit of transfer duty solenoid is open or shorted.

TROUBLE SYMPTOM:
Excessive “braking” in tight corners.

•Compare the speedometer with Subaru Select Monitor indications.  
•Vehicle speed is indicated in "km/h" or "MPH".  
7)Slowly increase the vehicle speed to 60 km/h or 37 MPH.  
NOTE:  
The speed difference between front and rear wheels may light the ABS warning light, but this indicates no malfunction. When AT control diagnosis is finished, perform the ABS memory clearance procedure of on-board diagnostics system. <Ref. to ABS-21, Clear Memory Mode.> | Does the speedometer indication increase as the Subaru Select Monitor data increases? | Even if the AT OIL TEMP warning light illuminates, the circuit has returned to a normal condition at this time. A temporary poor contact of the connector or harness may be the cause. Repair the harness or connector in TCM and transmission. | Go to step 11. |
### Diagnostic Procedure with Diagnostic Trouble Code (DTC)

**Automatic Transmission (Diagnosis)**

**Diagnostic Procedure with Diagnostic Trouble Code (DTC)**

1. **Check Input Signal for TCM Using Oscilloscope.**
   - Connect the connectors to TCM and transmission.
   - Lift-up or raise the vehicle and place safety stands.
   - Set the oscilloscope to TCM connector terminals.
   - **Non-Turbo Model**
     - Positive probe; (B55) No. 3:
     - Ground lead; (B55) No. 21:
   - **Turbo Model**
     - Positive probe; (B55) No. 24:
     - Ground lead; (B54) No. 19:
   - Start the engine and set vehicle in 20 km/h (12 MPH) condition.
   - NOTE: The speed difference between front and rear wheels may light the ABS warning light, but this indicates no malfunction. When AT control diagnosis is finished, perform the ABS memory clearance procedure of on-board diagnostics system. 
   - Measure the signal voltage indicated on oscilloscope.

2. **Check Poor Contact.**
   - Is there poor contact in rear vehicle speed sensor circuit? Repairs the poor contact. Replace the TCM. <Ref. to 4AT-67, Transmission Control Module (TCM).>

| 10   | **Check Input Signal for TCM Using Oscilloscope.**
|      | 1) Connect the connectors to TCM and transmission.
|      | 2) Lift-up or raise the vehicle and place safety stands.
|      | 3) Set the oscilloscope to TCM connector terminals.
|      | **Non-Turbo Model**
|      | Positive probe; (B55) No. 3:
|      | Ground lead; (B55) No. 21:
|      | **Turbo Model**
|      | Positive probe; (B55) No. 24:
|      | Ground lead; (B54) No. 19:
|      | 4) Start the engine and set vehicle in 20 km/h (12 MPH) condition.
|      | NOTE: The speed difference between front and rear wheels may light the ABS warning light, but this indicates no malfunction. When AT control diagnosis is finished, perform the ABS memory clearance procedure of on-board diagnostics system. <Ref. to ABS-21, Clear Memory Mode.>
|      | 5) Measure the signal voltage indicated on oscilloscope.
|      | Is the signal voltage more than AC 1 V? Even if the AT OIL TEMP warning light illuminates, the circuit has returned to a normal condition at this time. A temporary poor contact of the connector or harness may be the cause. Repair the harness or connector in TCM and transmission. Go to step 11.
| 11   | **Check Poor Contact.**
|      | Is there poor contact in rear vehicle speed sensor circuit? Repairs the poor contact.
|      | Replace the TCM. <Ref. to 4AT-67, Transmission Control Module (TCM).>
